

KoiBite

PROYEK AKHIR SBD

KoiBite

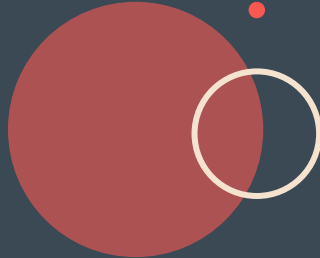

Kelompok 20

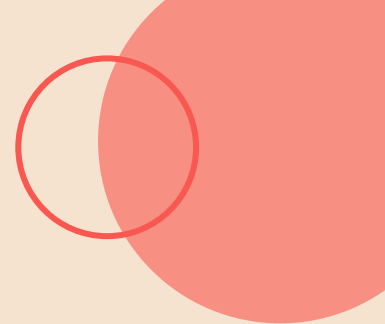

Ade Zaskia

Fauzan Arfa Nofiantoro

Michael Christian

Nirmala Sari

Latar Belakang

Permasalahan

- Pengguna sering sekali bingung menentukan makanan yang ingin dipesan
- Platform delivery hanya menampilkan banyak daftar makanan tanpa rekomendasi khusus
- Attention Span pengguna rendah

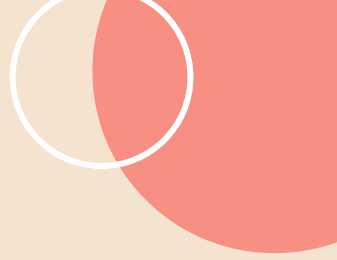

Solusi:

Konsep yang dihadirkan oleh KoiBite adalah platform food ordering yang melakukan:

- Pilih makanan berdasarkan swipe layaknya bumble
- Personalized recommendation
- Favorite Foods
- Order tracking
- Restaurant Dashboard dilengkapi dengan analytics system dan tracking order

Tujuan Pembuatan KoiBite

• • • •

Aplikasi food
ordering modern

Kelola transaksi
makanan real-time

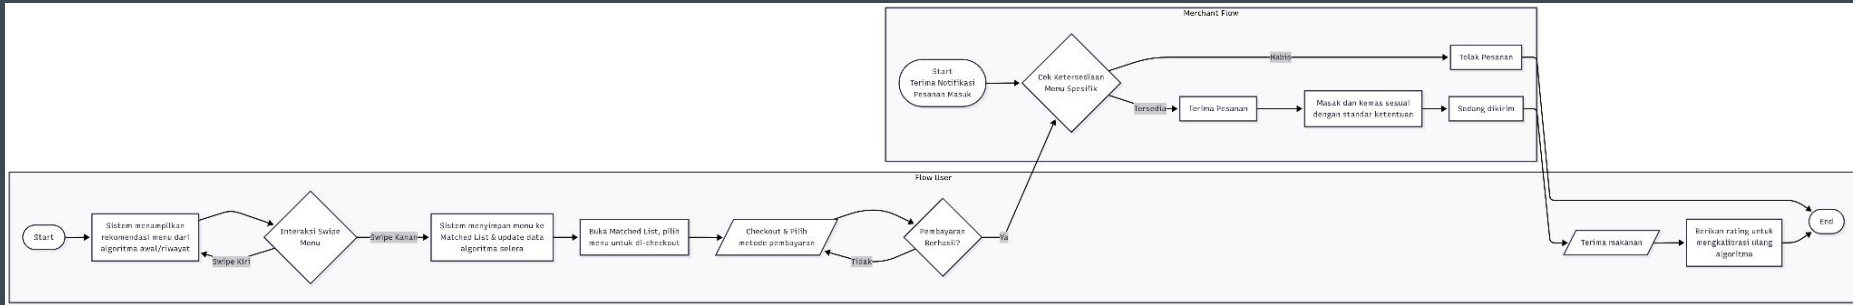

Implementasi
sistem role

Pelanggan sebagai User
Restaurant sebagai Partner

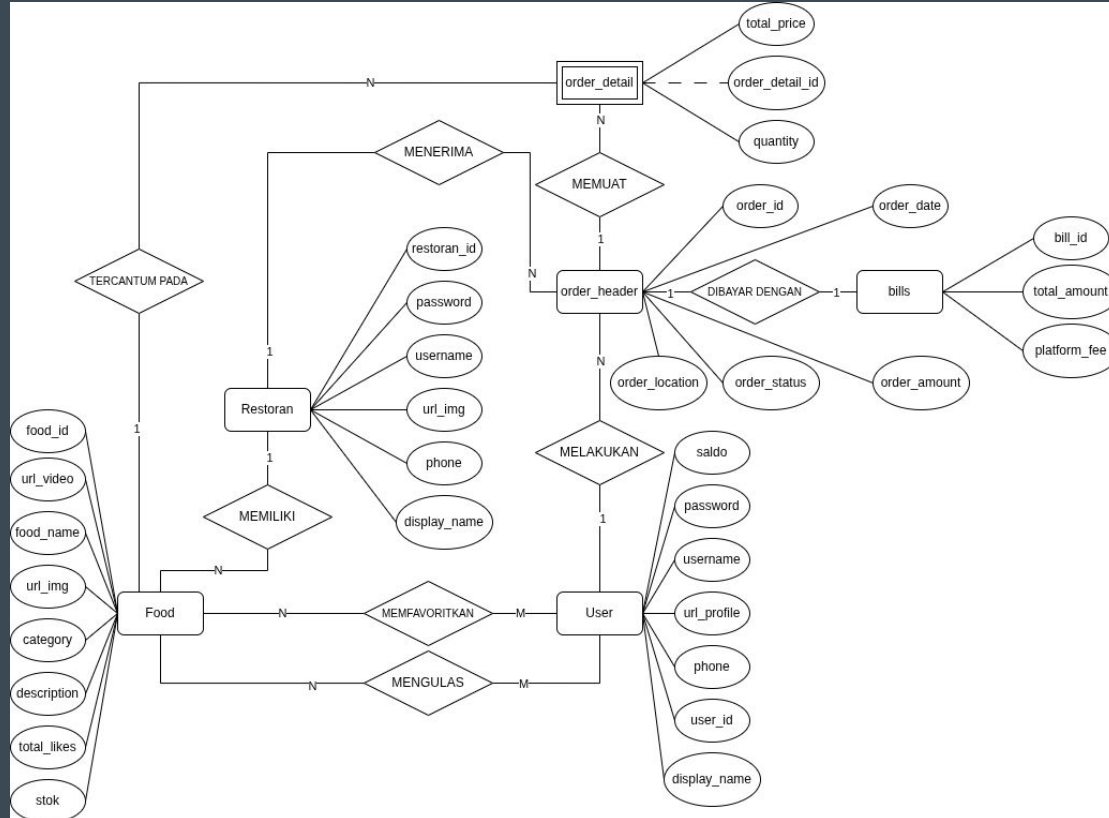

Implementasi
sistem tracking
pesanan

Integrasi backend,
frontend, &
database

Express Backend

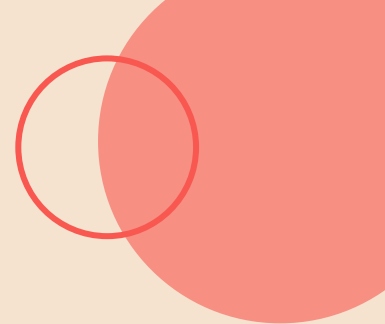

=-----

Repository Layer

PostgreSQL Database

- Frontend tangani UI dan interaksi user
- Backend tangani business logic, api req, dan akses ke database
- PostgreSQL simpan semua data app

Struktur Database

master_user

Simpan data utama terkait user

master_restaurant

Simpan data utama terkait restaurant

food

simpan semua menu makanan yang ada

favorit_user

Many to many relation user dan food

rating_review

Simpan review makanan

order_header

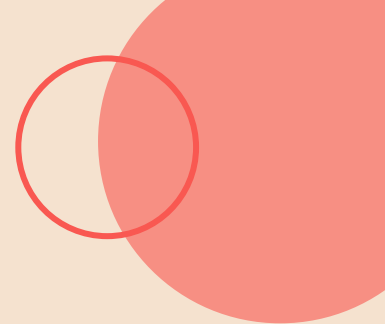

Simpan data utama pesanan

order_detail

Simpan item yang ada dalam pesanan

bills

Simpan data pembayaran

Authentication system

JWT Auth

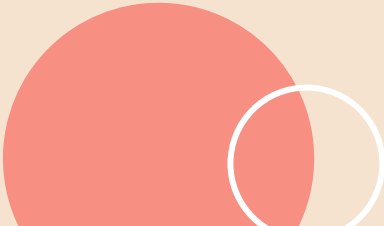

Login process

1. User login.
 2. Backend memverifikasi password.
 3. JWT token dibuat.
 4. Token disimpan di localStorage.
 5. Token digunakan untuk protected routes.
- Password hased using bcrypt
 - Rate limiter pada auth endpoint
 - Middleware auth based on roles

Order flow!

1. User memilih makanan.
2. Cart disimpan di localStorage.
3. User checkout.
4. Backend membuat:
 - a. Order Header
 - b. Order Detail
 - c. Bill
5. Saldo user dikurangi.
6. User diarahkan ke tracking page.

Tracking System

Order Tracking

Status

- Waiting
- Accepted
- Delivery
- Done

Real time flow

Restaurant ubah status order melalui dashboard lalu user melihat

- Profress order
- Total bayar
- Detail order
- Estimasi delivery

Favorite and recs system

Favorite System

User can:

- Menambahkan favorite food.
- Menghapus favorite food.
- Melihat daftar favorite.

Swipe food

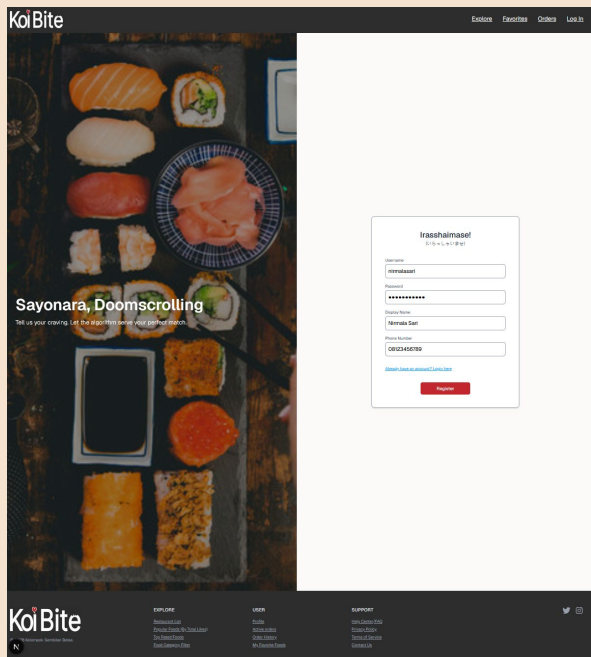

Homepage menggunakan swipe interaction:

- Right or love for match
- Left to skip food

Discovery makanan interaktif

The screenshot displays the KoiBite restaurant dashboard. The top navigation bar includes 'Explore', 'Favorites', and 'Orders'. The left sidebar features a profile for 'Zenbu House of Mozaru' and menu items like 'Orders', 'Menu Management', 'Statistics', and 'Settings'. The main area is titled 'Live Order Management' and shows a status toggle for 'Restaurant Open'. It is divided into four columns: 'New Orders' (with orders #17 and #18), 'Cooking' (with orders #14, #15, and #16), 'On Delivery' (with order #13), and 'Completed' (with orders #1 and #12). Each order card lists the item, quantity, price, and a status button.

Order ID	Time	Item	Quantity	Price	Status
#17	03:27 PM	1x Mozaru	1	Rp 92.000	Accept & Cook
#18	04:59 PM	2x Mozaru	2	Rp 182.000	Accept & Cook
#14	02:59 PM	1x Mozaru	1	Rp 92.000	Sent to Driver
#15	03:02 PM	1x Mozaru	1	Rp 92.000	Sent to Driver
#16	03:22 PM	1x Mozaru	1	Rp 92.000	Sent to Driver
#13	02:58 PM	1x Mozaru	1	Rp 92.000	Mark as Done
#1		2x Mozaru	2	Rp 180.000	Done
#12		1x Mozaru	1	Rp 92.000	Done

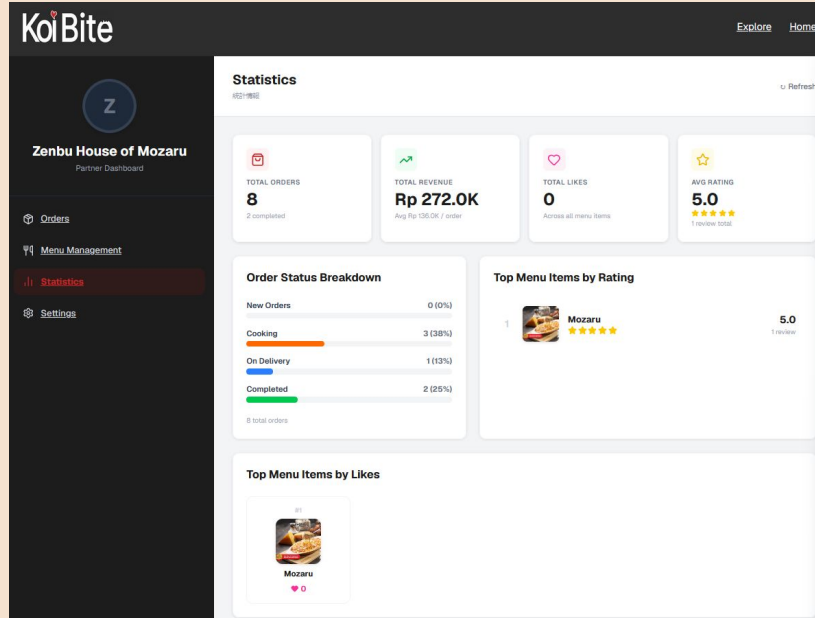

Dashboard order management

Menu Management

Demo app: restaurant

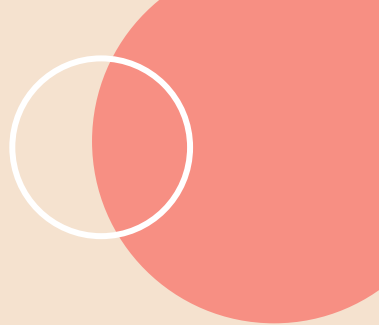

The screenshot shows the 'All Orders' section of the KoiBite app. It features a table with 8 total orders. The table columns are Order ID, Revenue, Status, and Date. The orders are listed with their respective IDs, revenue amounts, status labels (Processing, Delivery, Done, Waiting), and timestamps.

All Orders 8 total

ORDER ID	REVENUE	STATUS	DATE
#16	Rp 92.000	Processing	May 17, 03:22 PM
#15	Rp 92.000	Processing	May 17, 03:02 PM
#13	Rp 92.000	Delivery	May 17, 02:58 PM
#12	Rp 92.000	Done	May 17, 02:58 PM
#14	Rp 92.000	Processing	May 17, 02:59 PM
#1	Rp 180.000	Done	May 17, 10:02 AM
#18	Rp 182.000	Waiting	May 17, 04:58 PM
#17	Rp 92.000	Waiting	May 17, 03:27 PM

Conclusion

Implementasi KoiBite:

- Full-stack web app
- REST API architecture
- PostgreSQL rdb
- JWT Auth
- Role based system

Platform food ordering
dengan discovery makanan
interaktif
